

COVID-19 CONTINGENCY PLAN

FOR ON-CAMPUS PROGRAMS IN BARCELONA

PROCEDURE FOR STUDENTS AT JOHAN CRUYFF INSTITUTE WITH SYMPTOMS COMPATIBLE WITH COVID-19

Outside the institution's premises

- 1 **If a student shows symptoms** outside the premises of the institution, it is their responsibility to call 061 and/or go to their Primary Care Centre. The Health Services will indicate what steps need to be taken.
- 2 **The student must immediately** inform their program manager. Johan Cruyff Institute will follow the instructions given by the Health Services.
- 3 If a student has recently traveled to countries or areas in a phase of significant community transmission or has had contact with people from these areas, they should inform the institution and, if possible, self-isolate at home until a **10-day quarantine** period has elapsed since their return.

On the premises of the institution

The procedure to be followed within the premises is as follows:

- 1 **Students with symptoms compatible with Covid-19** should immediately inform their program manager, minimize their contact with other staff and students and, as far as possible, isolate themselves in a separate room. If this is not possible, they should respect a minimum distance of 2 meters from all other people. The use of a mask will be compulsory, and they must inform the institution of the people they have been in contact with.
- 2 The **student must return home and call 061** or his/her primary care referral center and follow the instructions received.
- 3 **The institution will inform the health authorities of the Autonomous Community of Catalonia** about how it is handling the suspected case of Covid-19 and will follow the instructions given by the health services.
- 4 The public health authorities will report the results of the test and, if it is confirmed that the student has tested positive for Covid-19, **the persons that he/she has been in contact with should be identified**. Home isolation of the entire group of students for a period of time is not ruled out.
- 5 The area(s) where the student with Covid-19 symptoms has been will **be cleaned thoroughly**, especially all frequently used surfaces and areas.
- 6 **If a student is in preventive isolation at home because of Covid-19**, he/she must inform their program manager and under no circumstances must he/she go to the center to attend the programmed sessions. The coordination team will analyze the case and the necessary teaching adjustments will be made so that the student can follow the program properly.
- 7 **The institution will follow the instructions of the Health Services** regarding possible confinement—who and for how long—and will inform those affected of the steps to be taken.
